

Analog Transmitter

SIGNAL 4.0

OVERVIEW

Operation

- The position of a magnetic float / piston is detected by means of Hall sensors and converted into an analog signal.

Application

- Use in combination with float-type sensors for various flow media (see table on page 2)
- Industry 4.0

Features

- Analog output (4-20 mA and 0-10 V)

Installation information

- Refer also to the applicable data sheets and operating instructions for the flow monitor!

CONNECTION DIAGRAM

Attention:

Pin 5 must not be electrically connected! We strongly recommend use of a four core cable.

The SIGNAL 4.0 must not be removed from the basic unit. In case of a removal a loss of warranty is possible.
